Application No. 10/648,173
Amendment dated March 8, 2007
Reply to Office Action of December 8, 2006

Docket No.: 5234-0170PLJS1

AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A data processing system applying in a wireless local areas network (WLAN), the WLAN comprising a plurality of data receiving/transmitting apparatus, the system at least being set up in a first data receiving/transmitting apparatus to let the first data receiving/transmitting apparatus proceed the received or transmitting data, the system comprising:

a transmitting device for processing the transmitting data transmitted to a second data receiving/transmitting apparatus, the transmitting device comprising:

a look up table, ~~when the data processing system transmitting data to the plurality of data receiving/transmitting apparatus~~, for recording the data compressing method and the identification number corresponding to each of the plurality of data receiving/transmitting apparatus;

a control module for determining a corresponding data compressing policy according to the record of the second data receiving/transmitting apparatus in the look up table before the transmitting data being transmitted to the second data receiving/transmitting apparatus; and

a data compressing module for compressing the transmitting data according to a data compressing method which is assigned by the control module; and

a receiving device for processing a receiving data, the receiving device comprising:
an identity module for identifying the data compressing method of the received data; and
a data decompressing module for decompressing the received data according to the data compressing method which is identified by the identity module.

Application No. 10/648,173
Amendment dated March 8, 2007
Reply to Office Action of December 8, 2006

Docket No.: 5234-0170PLUS1

2. (Original) The data processing system of claim 1, wherein the data compressing policy comprises:

if the data compressing method used by the second data receiving/transmitting apparatus has been recorded into the look up table, the control module notifying the data compressing module to compress the data according to the data compressing method recorded in the look up table; and

if the data compressing method used by the second data receiving/transmitting apparatus hasn't been recorded into the look up table, the control module determining a process to negotiate with the second data receiving/transmitting apparatus by a predetermined inquiring procedure.

3. (Currently Amended) The data processing system of claim 2, wherein the inquiring procedure comprises:

transmitting an inquiring signal to the second data receiving/transmitting apparatus;
waiting for a response signal responded by the second data receiving/transmitting apparatus; and

proceeding a predetermined responding processing procedure in a predetermined waiting period, for following up with transmitting the data.

4. (Original) The data processing system of claim 3, wherein the response signal comprises following responding information:

whether the transmitting data should be compressed; and
the data compressing method being used when the transmitting data should be compressed.

Application No. 10/648,173
Amendment dated March 8, 2007
Reply to Office Action of December 8, 2006

Docket No.: 5234-0170PUS1

5. (Original) The data processing system of claim 4, wherein the responding processing procedure comprises:

if receiving the response signal in the predetermined waiting period, then processing the transmitting data according to the responding information of the response signal; and

if not receiving the response signal in the predetermined waiting period, then directly transmitting the transmitting data without compressing.

6. (Original) The data processing system of claim 5, wherein, when the responding information of the response signal shows unnecessary to proceed the data compression, the control module notifies the data compressing module not to proceed the compressing procedure, and transmits the transmitting data directly.

7. (Original) The data processing system of claim 5, wherein, when the responding information of the response signal shows necessary to proceed the data compression, the look up table creates a data record to record the device identification number of the second data receiving/transmitting apparatus, the information of data compression, and the information of the corresponding data compressing method into the look up table.

8. (Original) The data processing system of claim 5, wherein, when the responding information of the response signal shows unnecessary to proceed the data compression, the look up table creates a data record to record the device identification number of the second data receiving/transmitting apparatus, the information of unnecessarily proceeding data compression into the look up table.

9. (Original) The data processing system of claim 5, wherein, if not receiving the responding data in the predetermined waiting period, the look up table creates a data record to

Application No. 10/648,173
Amendment dated March 8, 2007
Reply to Office Action of December 8, 2006

Docket No.: 5234-0170PUS1

record the device identification number of the second data receiving/transmitting apparatus, the information of unnecessarily proceeding data compression into the look up table.

10. (Original) The data processing system of claim 1, the data compressing method is to compress the transmitting data during performing the data packet packaging procedure.

11. (Original) The data processing system of claim 10, wherein the data compressing method is to proceed the loss-less compression with the transmitting data by the data compressing method of ZIP or LZH.

12. (Currently Amended) A data processing method of wireless local areas network (WLAN), the WLAN comprises pluralities of data receiving/transmitting apparatus, the processing method processes a transmitting data at least in one data receiving/transmitting apparatus, for following up with transmitting the transmitting data to a target data receiving/transmitting apparatus of the WLAN, the data receiving/transmitting apparatus comprising a look up table, the look up table comprising a plurality of data records for recording the a data compressing method and the a identification number corresponding to each of the plurality of data receiving/transmitting apparatus when the data processing system transmitting data to the plurality of data receiving/transmitting apparatus, the data processing method comprises:;

determining a corresponding data compressing policy according to the record of the target data receiving/transmitting apparatus in the look up table before the transmitting data being transmitted to the target data receiving/transmitting apparatus; and

compressing the transmitting data according to a data compressing method corresponding to the target data receiving/transmitting apparatus recorded in the data compressing policy.

Docket No.: 5234-0170PLUS1

13. (Original) The data processing method of claim 12, wherein the transmitting data comprises a header and a main data.

14. (Original) The data processing method of claim 12, wherein the data compressing policy comprises:

if the data compressing method used by the target data receiving/transmitting apparatus has been recorded into the look up table, compressing the transmitting data according to the data compressing method recorded in the look up table; and

if the data compressing method used by the target data receiving/transmitting apparatus hasn't been recorded into the look up table, determining a process to process the transmitting data according to a predetermined inquiring procedure.

15. (Currently Amended) The data processing method of claim 14, wherein the inquiring procedure comprises:

transmitting an inquiring signal to the target data receiving/transmitting apparatus;
waiting for a response signal responded by the target data receiving/transmitting apparatus; and

proceeding a predetermined responding processing procedure in a predetermined waiting period, for following up with transmitting the data.

16. (Original) The data processing method of claim 15, wherein the response signal comprises the following response signal information:

whether the transmitting data should be compressed; and
the data compressing method being used when the transmitting data should be compressed.

Docket No.: 5234-0170PLS1

17. (Original) The data processing method of claim 15, wherein the response signal processing procedure comprises:

if receiving the response signal in the predetermined waiting period, then processing the transmitting data according to the responding information of the response signal; and

if not receiving the response signal in the predetermined waiting period, then directly transmitting the transmitting data without compressing.

18. (Original) The data processing method of claim 17, wherein, when the responding information of the response signal shows unnecessary to proceed the data compression, then the data receiving/transmitting apparatus doesn't compress the transmitting data, and transmits the transmitting data directly.

19. (Original) The data processing method of claim 17, wherein, if the responding information of the response signal shows necessary to proceed the data compression, the look up table creates a data record to record the device identification number of the target data receiving/transmitting apparatus, the information of data compression, and the information of the corresponding data compressing method into the look up table.

20. (Original) The data processing method of claim 17, wherein, if the responding information of the response signal shows unnecessary to proceed the data compression, the look up table creates a data record to record the device identification number of the target data receiving/transmitting apparatus, the information of not proceeding data compression into the look up table.

21. (Original) The data processing method of claim 17, wherein, if not receiving the response signal in the predetermined waiting period, the look up table creates a data record to

Docket No.: 5234-0170PUS1

record the device identification number of the target data receiving/transmitting apparatus, the information of not proceeding data compression into the look up table.

22. (Original) The data processing method of claim 12, wherein the data compressing method is to compress the transmitting data during performing the data packet packaging procedure.

23. (Original) The data processing method of claim 22, wherein the data compressing method is to proceed the loss-less compression with the transmitting data by the data compressing method of ZIP or LZH.

24. (New) A data receiving/transmitting apparatus communicating with a plurality of data processing systems in a wireless network, the data receiving/transmitting apparatus being capable of transmitting a transmitting data to a first data processing system, the data receiving/transmitting apparatus comprising:

a look up table for storing a plurality of records relative to compressing methods used respectively and previously between the data receiving/transmitting apparatus and the data processing systems;

a control module for determining a first data compressing method according to a first record corresponding to the first data processing system in the look up table; and

a data compressing module for compressing the transmitting data according to the first compressing method.

25. (New) The data receiving/transmitting apparatus of claim 24, wherein if the first record has been existed in the look up table, the control module notifies the data compressing module to compress the transmitting data according to the first data compressing method

Application No. 10/648,173
Amendment dated March 8, 2007
Reply to Office Action of December 8, 2006

Docket No.: 5234-0170PLUS1

recorded in the look up table; and if the first record has not been existed in the look up table, the control module determines a process to negotiate with the first data processing system by a predetermined inquiring procedure.

26. (New) The data receiving/transmitting apparatus of claim 25, wherein the inquiring procedure comprises:

transmitting an inquiring signal to the first data processing system;
waiting for a response signal responded by the first data processing system; and
proceeding a predetermined responding processing procedure in a predetermined waiting period, for following up with transmitting the transmitting data.

27. (New) The data receiving/transmitting apparatus of claim 26, wherein the response signal comprises following responding information:

whether the transmitting data should be compressed; and
the data compressing method being used when the transmitting data should be compressed.

28. (New) The data receiving/transmitting apparatus of claim 27, wherein the responding processing procedure comprises:

if receiving the response signal in the predetermined waiting period, then processing the transmitting data according to the responding information of the response signal; and
if not receiving the response signal in the predetermined waiting period, then directly transmitting the transmitting data without compressing.

29. (New) The data receiving/transmitting apparatus of claim 28, wherein, when the responding information of the response signal shows unnecessary to proceed the data

Application No. 10/648,173
Amendment dated March 8, 2007
Reply to Office Action of December 8, 2006

Docket No.: 5234-0170PUS1

compression, the control module notifies the data compressing module not to proceed the compressing procedure, and transmits the transmitting data directly.

30. (New) The data receiving/transmitting apparatus of claim 28, wherein, when the responding information of the response signal shows necessary to proceed the data compression, the look up table creates a data record to record the device identification number of the first data processing system, the information of data compression, and the information of the corresponding data compressing method into the look up table.

31. (New) The data receiving/transmitting apparatus of claim 28, wherein, when the responding information of the response signal shows unnecessary to proceed the data compression, the look up table creates a data record to record the device identification number of the first data processing system and the information of unnecessarily proceeding data compression into the look up table.

32. (New) The data receiving/transmitting apparatus of claim 28, wherein, if not receiving the responding data in the predetermined waiting period, the look up table creates a data record to record the device identification number of the first data processing system and the information of unnecessarily proceeding data compression into the look up table.

33. (New) The data receiving/transmitting apparatus of claim 24, the data compressing method is to compress the transmitting data during performing a data packet packaging procedure.

34. (New) The data receiving/transmitting apparatus of claim 33, wherein the data compressing method is to proceed the loss-less compression with the transmitting data by the data compressing method of ZIP or LZH.

Application No. 10/648,173
Amendment dated March 8, 2007
Reply to Office Action of December 8, 2006

Docket No.: 5234-0170PUS1

35. (New) A data processing method for a data processing system, the data processing system communicating with a plurality of data processing systems and having a look up table for storing a plurality of records relative to compressing methods used respectively and previously between the data processing system, the method comprising:

determining whether a target data processing system is recorded in a record of the look up table;

transmitting an inquiring signal to the target data processing system if there is no record corresponding to the target data processing system in the look up table;

receiving a response signal from the data processing system;

performing a data process on a transmitting data according to the response signal; and

recording the data process and a device identification number of the target data processing system in the look up table.

36. (New) The data processing method of claim 35, the method further comprising:

if a compressing method corresponding to the target data processing system is recorded in the look up table, compressing the transmitting data with the data compressing procedure.

37. (New) The data processing method of claim 35, wherein the response signal comprises information about whether to proceed data compressing or not and a corresponding compressing method.
